ETHGLOBAL MUMBAI 2026 THE PROBLEM

Blockchain shows what happened.

But who understands the strategy behind it?

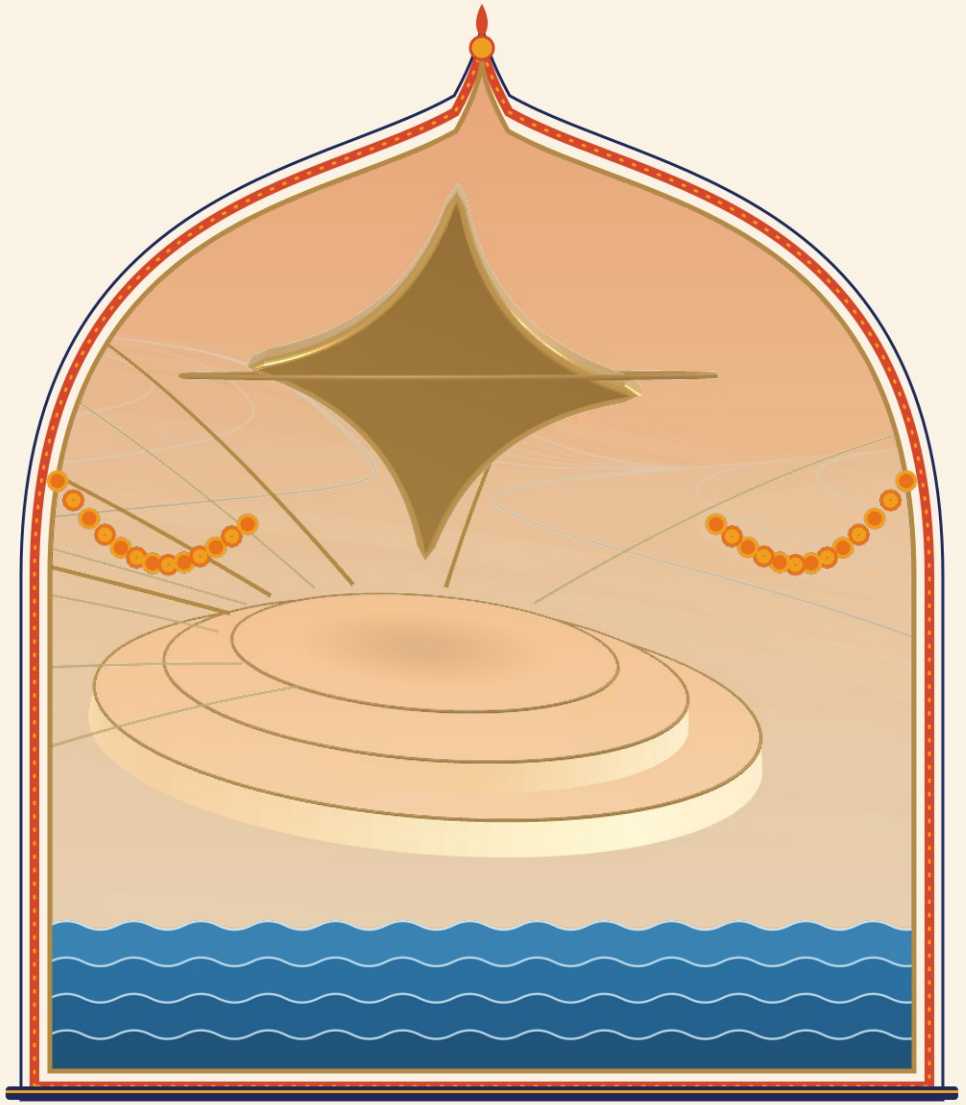

DeFi transactions are transparent. Liquidity-management behaviour is still difficult to understand.

1. Raw transactions are fragmented
2. LP strategy decisions are hard to reconstruct
3. Evaluating experienced LPs takes manual research

BUILT FOR New LPs · Experienced LPs · DeFi researchers & developers

TRACE
ON-CHAIN STRATEGY INTELLIGENCE

Turn public liquidity activity into understandable, evidence-backed strategy intelligence.

THE PRODUCT · HOW IT WORKS

From a public wallet to an understandable liquidity strategy

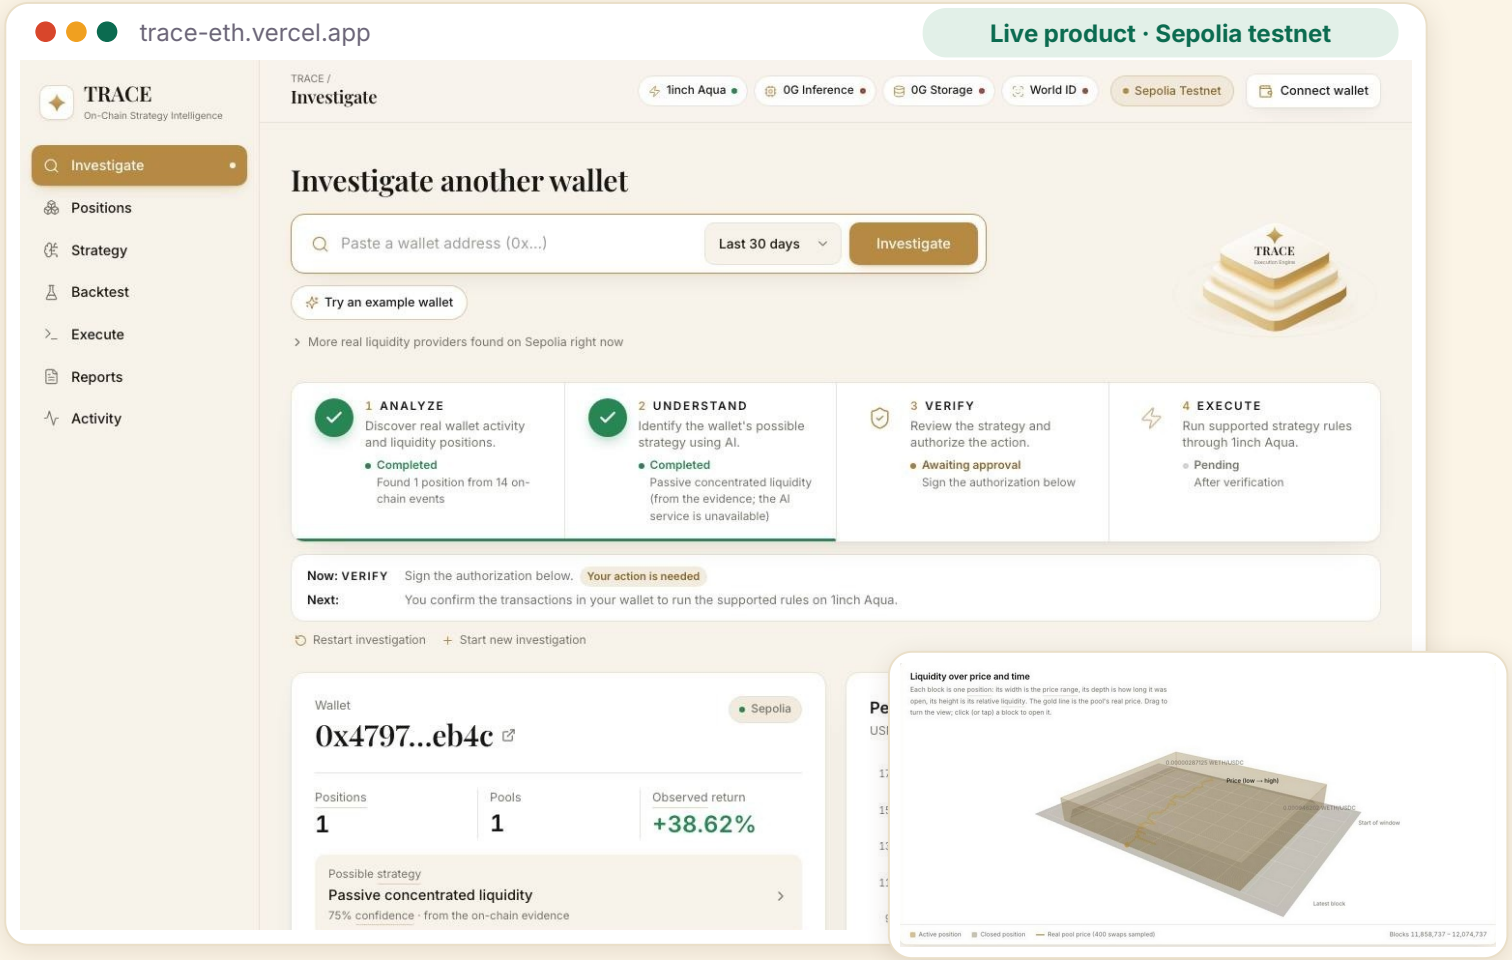

01 **INVESTIGATE**
Enter any public Ethereum wallet address.

02 **RECONSTRUCT**
Rebuild Uniswap V3 positions: liquidity changes, range moves, fee collections.

03 **UNDERSTAND**
AI-assisted analysis names likely strategy patterns, each linked to on-chain evidence.

04 **VALIDATE**
Backtest candidate rules on historical swaps; compare return and risk.

05 **EXECUTE**
Check Aqua compatibility and prepare supported rules, with explicit human authorization.

BUILT WITH WEB3 ECOSYSTEM TECHNOLOGIES

One intelligence layer. A powerful Web3 technology stack

Uniswap

Liquidity data

V3 positions rebuilt from events; exact TickMath in BigInt

Live on Sepolia

ethereum

Verifiable foundation

Every finding links back to its on-chain transaction

Live on Sepolia

world

Human authorization

IDKit proof verified server-side; nullifier blocks replay

Integrated · awaiting app registration

1inch

Execution layer · Aqua

Order hash, approvals and price bounds verified before signing

Ship verified · Sepolia test

0G

AI + storage

Private Computer inference; reports archived to 0G Storage

Integrated · access + funding pending

Technologies TRACE builds with; no partnership or endorsement implied. Status as of 7 Nov 2026.

Green works today · **Amber** built, awaiting access

WHY TRACE IS DIFFERENT

From tracking wallets to understanding strategies

TRADITIONAL ANALYTICS	TRACE
— Transaction history	✓ **Position lifecycle reconstruction**
— Wallet balances	✓ **Behavioural strategy intelligence**
— Position monitoring	✓ **Evidence-linked AI hypotheses**
— Basic activity metrics	✓ **Historical strategy backtesting**
	✓ **Compatibility-aware execution**

WHAT'S NEXT *Today: live on Sepolia · everything below is planned*

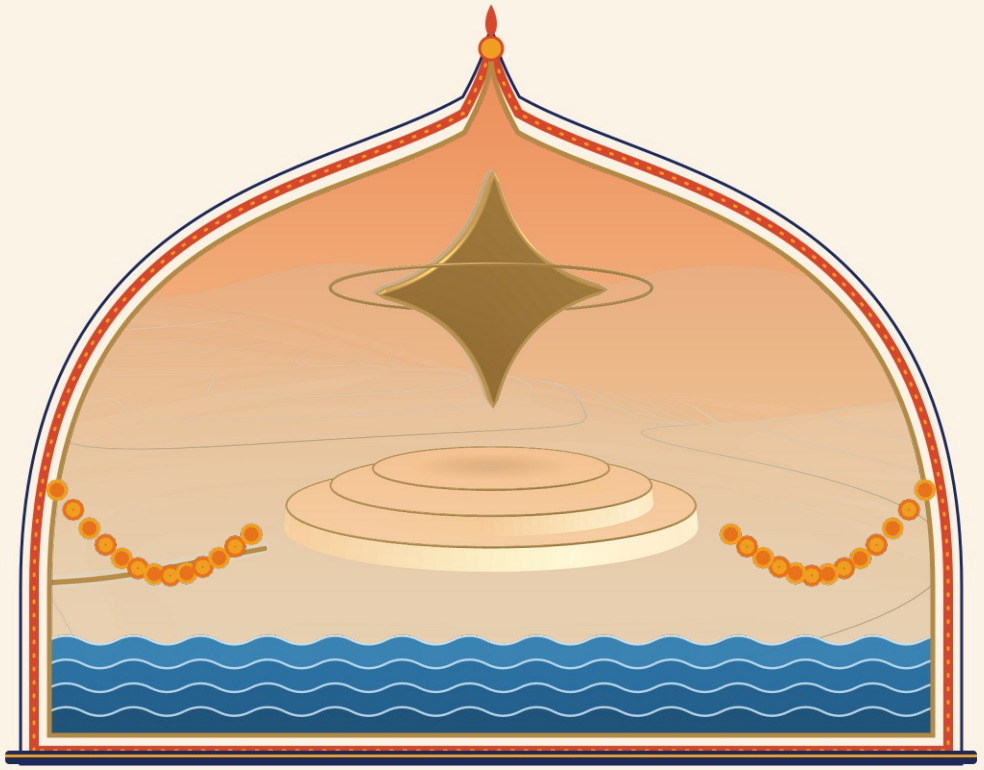

01 Deeper intelligence

02 Personalized insights

03 Controlled automation

04 DeFi intelligence layer

Understand. Reconstruct. Validate. Execute.

Uniswap made liquidity accessible.

TRACE wants to make the *intelligence* behind that liquidity accessible too.

TRACE — On-chain Strategy Intelligence

Don't just track what a wallet does. Understand the strategy behind it.
