THE PROBLEM

Blockchain shows what happened.
But who understands the strategy behind it?

DeFi transactions are transparent. Liquidity-management behaviour is still difficult to understand.

01 Raw transactions are fragmented

02 LP strategy decisions are hard to reconstruct

03 Evaluating experienced LPs takes manual research

TRACE
ON-CHAIN STRATEGY INTELLIGENCE

Turn public liquidity activity into understandable, evidence-backed strategy intelligence.

From a public wallet to an understandable liquidity strategy

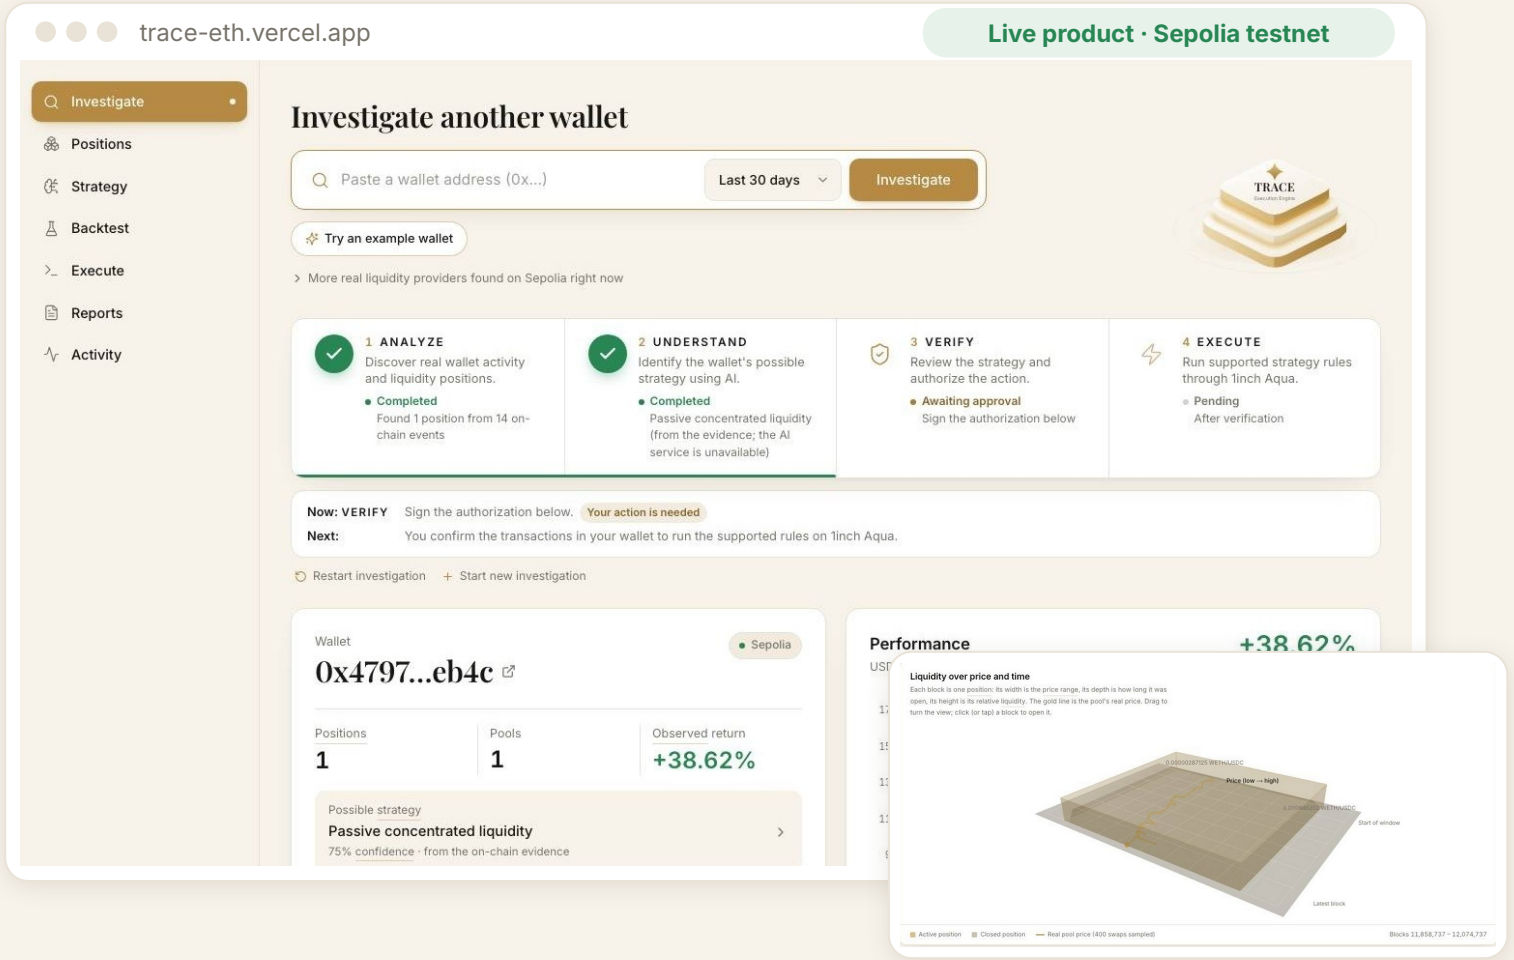

01 INVESTIGATE
Enter any public Ethereum wallet address.

02 RECONSTRUCT
Rebuild Uniswap V3 positions: liquidity changes, range moves, fee collections.

03 UNDERSTAND
AI-assisted analysis names likely strategy patterns, each linked to on-chain evidence.

04 VALIDATE
Backtest candidate rules on historical swaps; compare return and risk.

05 EXECUTE
Check Aqua compatibility and prepare supported rules, with explicit human authorization.

REAL USERS · REAL USE CASE

Built for people who want to understand liquidity, not just observe it

New liquidity providers

PROBLEM Don't know how experienced LPs manage concentrated liquidity.

TRACE HELPS Study real LP behaviour and range moves; evaluate rules before deciding.

Experienced LPs

PROBLEM Researching and comparing other wallets by hand takes time.

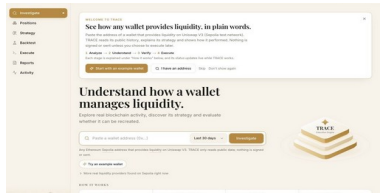

TRACE HELPS Reconstruct positions, compare patterns and backtest candidate strategies.

DeFi researchers & developers

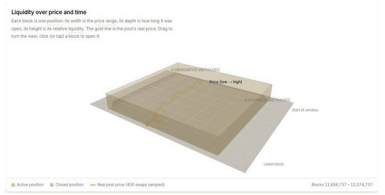

PROBLEM Raw transactions are hard to turn into structured research.

TRACE HELPS Study position lifecycles and management patterns with linked evidence.

Illustrative scenario A user has $10,000 and wants to provide liquidity in an ETH/USDC Uniswap V3 pool.

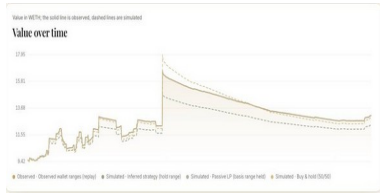

1 Investigates a public LP wallet

2 TRACE rebuilds how it managed liquidity

3 Examines range changes and fee collection

4 Backtests a candidate strategy

5 Makes their own informed decision

Illustrative only. Not a promise of returns; historical backtests do not guarantee future results.

BUILT WITH WEB3 ECOSYSTEM TECHNOLOGIES

One intelligence layer. A powerful Web3 technology stack

Technologies TRACE builds with; no partnership or endorsement implied. Status as of 7 Nov 2026.

ROADMAP · LONG-TERM VISION

From understanding liquidity strategies to powering the future of DeFi

TODAY · LIVE ON SEPOLIA Reconstruct Uniswap V3 positions · evidence-linked strategy hypotheses · backtests on real swaps · Aqua compatibility checks

01 PLANNED

Deeper intelligence

- Expand Uniswap LP position and wallet analysis
- Identify more liquidity-management patterns
- Stronger evidence-backed strategy inference
- Better backtesting and risk evaluation

Make liquidity behaviour easier to understand.

02 PLANNED

Personalized strategy intelligence

- User-specific strategy research
- Risk-preference-aware comparisons
- Wallet and strategy comparison
- Alerts on meaningful strategy and position changes

Make research relevant to each LP.

03 PLANNED

Controlled strategy automation

- More compatible Aqua execution workflows
- Monitoring and condition-based actions
- Controlled rebalancing where supported
- Stronger human authorization and safety

Less manual effort, users stay in control.

04 PLANNED

DeFi intelligence ecosystem

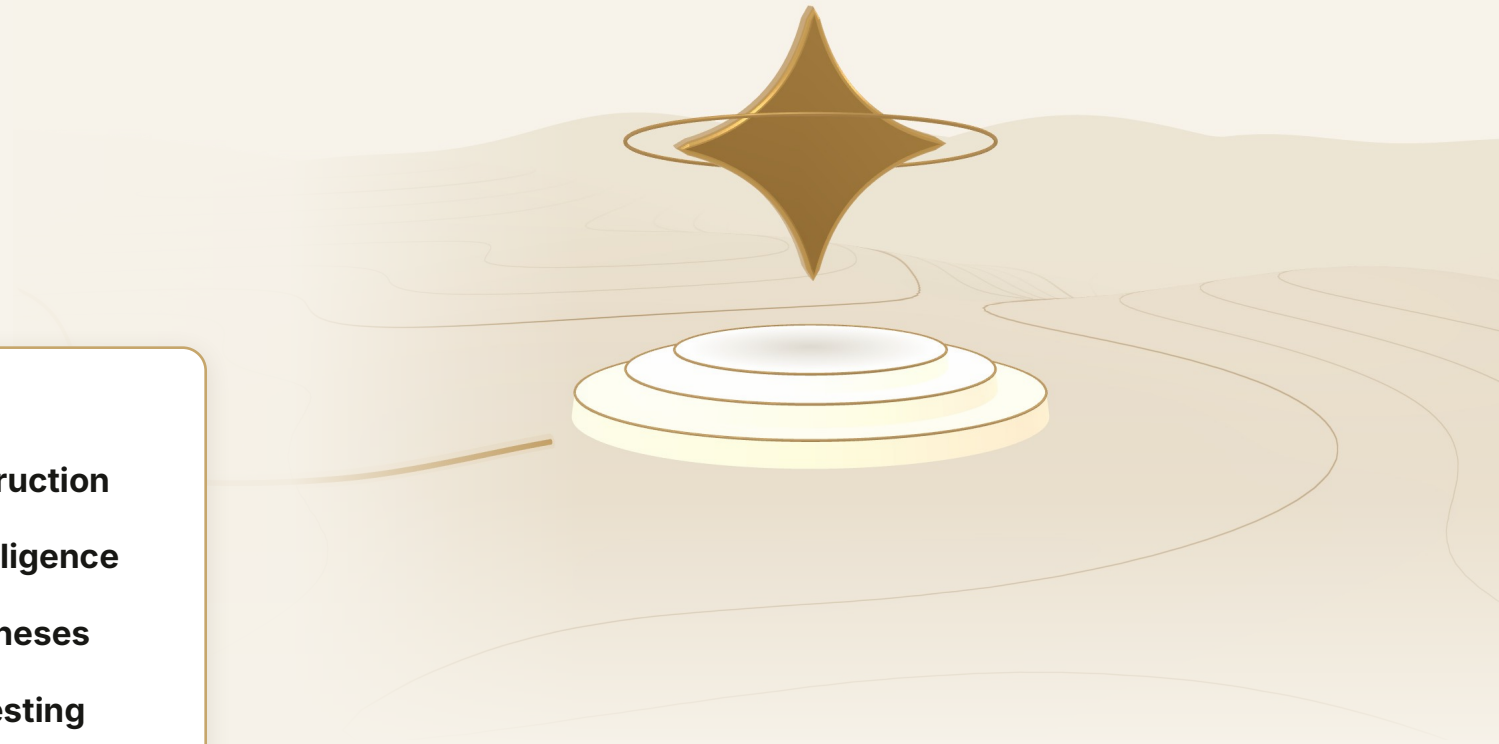

- Explore more protocols and liquidity markets
- Developer APIs and research tools
- Cross-protocol strategy analysis
- More ecosystem integrations

A reusable intelligence layer for DeFi.

Building progressively. Validating every step.

WHY TRACE IS DIFFERENT

From tracking wallets to understanding strategies

TRADITIONAL ANALYTICS

- Transaction history
- Wallet balances
- Position monitoring
- Basic activity metrics

TRACE

- ✓ **Position lifecycle reconstruction**
- ✓ **Behavioural strategy intelligence**
- ✓ **Evidence-linked AI hypotheses**
- ✓ **Historical strategy backtesting**
- ✓ **Compatibility-aware execution**

PRODUCT VISION

Make sophisticated liquidity-management behaviour easier to understand, evaluate and learn from.

Uniswap made liquidity accessible.

TRACE wants to make the *intelligence* behind that liquidity accessible too.

TRACE — On-chain Strategy Intelligence

Don't just track what a wallet does. Understand the strategy behind it.

Understand. Reconstruct. Validate. Execute.
